# Thejitha Sathsara Rajapakshe

US Permanent Resident | +1 (301) 676-3460 | thejitha.rajapakshe@gmail.com | linkedin.com/in/thejitharajapakshe

## EDUCATION

**University of Maryland College-Park** — ***Expected Spring 2028***
*B.S. in Computer Science | Dean's List 3x, STEM Scholar, Renaissance Scholar* — *College Park, MD*

## EXPERIENCE

**Product Management Intern** — *May 2026 – August 2026*
*Red Hat (IBM)* — *Raleigh, NC*
- Embedded as PM bringing agentic AI CVE remediation into Red Hat's Trusted Application Pipeline, cutting time-to-remediation 90% in testing against a multi-day manual triage cycle.
- Built working prototypes of automated scanning and AI-driven code patching with AI coding assistants instead of eng cycles, pairing the demo with a competitive teardown to align leadership and land it on the roadmap.
- Turned customer calls and CVE reports into requirements and acceptance criteria with LLM tooling, across Project Lightwell (IBM/Red Hat's $5B open-source security effort), Trusted Profile Analyzer, and Trusted Artifact Signer.

**Project Lead** — *Mar 2026 – Present*
*XR Club @ UMD* — *College Park, MD*
- Leading a student development team building VR/AR features for Augmental World, a virtual/augmented space startup.
- Own scope, milestones, and handoffs on a sprint cadence, shipping features into the startup's production apps.
- Ran sprint planning and backlog grooming in Jira to keep the team organized, prototyped flows in Unity to test interactions before build, and used Figma AI to design event posters, leaning on AI tools throughout to move faster.

**Co-Founder** — *Mar 2025 – Present*
*NurseLearn AI* — *College Park, MD*
- Co-founded an AI study platform turning nursing students' PDFs, slides, and notes into NCLEX-style quizzes with rationales, a study coach, and mastery analytics.
- Set product direction from student interviews, prioritizing answer accuracy and mastery tracking over feature breadth.
- Built LLM ingestion and quiz generation with OCR, embeddings, and RAG retrieval, turning manual study prep into a single upload.

**Product Management & Software Engineering Intern** — *Aug 2024 – May 2025*
*TSESSEBE Technologies* — *Germantown, MD*
- Owned requirements from outreach to launch, turning customer interviews into PRDs the eng team built from.
- Hardened Express.js APIs and Firebase Auth, holding reliability at **300+** workshop-user scale.
- Integrated Stripe into the REST backend, converting a free pilot into a paying product and unblocking first revenue.

**Undergraduate Data Science Research Intern** — *Jun 2024 – Aug 2024*
*iHarp, University of Maryland Baltimore County* — *Baltimore, MD*
- Analyzed Amazon wildfire and Antarctic sea-ice data (NumPy, CNNs, netCDF4) to test physics-informed models against standard baselines.
- Trained physics-informed forecasting models for environmental data and deployed them on AWS.

**Software Engineering Fellow** — *Jun 2024 – Aug 2024*
*Headstarter AI* — *Remote*
- Shipped 5 full-stack AI products in 8 weeks (React, Node.js, AWS, GPT-4) under industry-engineer mentorship.

## LEADERSHIP

**Southern Management Leadership Program** — *Fall 2024 – Present*
- Student Entrepreneur – selected out of 500 applicants. Build and scale a venture, lead community service projects, and expand impact through mentorship, pitch reviews, and entrepreneurship labs.

## PROJECTS

**EyeTune** | Python, OpenCV, MediaPipe | HopHacks '25 Winner: Healthcare Track — *Sep 2025*
- Led a 3-person team to a Healthcare-track win at HopHacks '25, beating 102 submissions from 57 schools.
- Built real-time eye-wellness pipeline (blink rate, squint, distance, ambient light) to auto-adjust screen settings.

**Memento** | Next.js, Flask, PostgreSQL, Gemini (STT+NLP), Tailwind, Supabase | Bitcamp '25 — *Apr 2025*
- Initiated product direction for memory-care use case (persona, success metrics).
- Coordinated handoffs via API contracts to ship a stable end-to-end demo in 36 hours at Bitcamp, a 1,000+ hacker event.

**UnEmploeesVS** | LangGraph, PostgreSQL, Redis, Streamlit, Pydantic, Trustcall | Hoya Hacks '25 — *Jan 2025*
- Wrote the PRD with acceptance criteria and set KPIs (time-to-answer, relevance) to judge the build against.
- Designed the LangGraph multi-agent interview flow that automates a full mock-interview loop end to end.

## TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, R, Java, C/C++, SQL, Bash
Tools: Git, Docker, AWS (EC2, S3), Vercel, Figma, Jira, Stripe, Clerk, Firebase, Postman, Jupyter Notebook
DB & Backend Technologies: MongoDB, Node.js, Express.js, PostgreSQL, Prisma, Supabase
AI & LLM: GPT-4, Gemini, LangGraph multi-agent orchestration, RAG (embeddings + retrieval), OCR pipelines, Hugging Face
Python libraries & Tools: TensorFlow, PyTorch, Matplotlib, NumPy, pandas, scikit-learn
